

Thy Will be Done are proud members of the Woodland Carbon Capture Scheme

How it works

- When we place a print order we can elect to capture the carbon from the manufacture and distribution of the paper
- The amount of CO₂ generated in the production and delivery of our paper order is calculated
- We pay a Carbon Capture charge to the Woodland Trust who plant woodland at one of their accredited woodland creation sites in the UK
- We may then use The Woodland Carbon logo in conjunction with our print job to demonstrate our commitment to using reduced CO₂ paper

What is Woodland Carbon?

Woodland Carbon is an accredited, award-winning carbon removal scheme that is operated under the Government's 2011 Woodland Carbon Code. Organisations looking to reduce their environmental impact and mitigate their carbon emissions can fund tree planting with the Woodland Trust, the UK's leading woodland conservation charity. It is estimated that 25m² of native British woodland captures and stores at least 1 tonne of CO₂. To find out more please visit www.woodlandcarbon.co.uk

About the Woodland Trust

The Woodland Trust aims to improve the landscape of Britain by planting more trees and protecting our national heritage of precious ancient woodland. Its vision is a UK rich in native woods and trees enjoyed and valued by everyone and they work to deliver three guiding principles:

- To enable the creation of more native woods and places rich in trees.
- To protect native woods, trees and their wildlife for the future.
- To inspire everyone to enjoy and value woods and trees.

The Trust looks after over 1,200 woodlands which have free and easy access for everyone to enjoy. With a member and supporter base of over 400,000 people its work and influence is growing year on year. Premier recognises the vital role that the charity plays in securing a sustainable future through trees, improving biodiversity and protecting the habitat of native wildlife.

The UK is one of the least wooded countries in Europe, with just 13 percent tree cover compared to the European average of 44 percent.

The Woodland Trust has established home-grown woodland creation projects that offer companies the chance to mitigate their CO₂ emissions. At the same time, organisations will also be supporting projects that improve biodiversity, enhance social well-being, help the landscape adapt to climate change and ensure the UK is no longer one of the least wooded nations in Europe. Woodland Carbon provides a strong external message but also has tangible outcomes – trees that can be seen and visited throughout the UK.
